

# Humaniti

Humaniti is a major space faring race. Their Planet of origin is a planet called Terra, though around 300,000 years ago a mysterious race called The Ancients transplanted Humaniti on several planets throughout the galaxy for unknown reasons.

There are 3 major races of Humaniti, the Solomani (Humans from Terra), Vlani (Humans from Vland), and the Zhodani (Humans from Zhodane). Though all 3 races have diverging histories separated by 300,000 years, all the races of Humaniti have the same physical characteristics and genetics, though modern science can distinguish between them. A typical human adult stands 1.75 to 2m in height, and has a wide variety of skin color ranging from pale pink to dark brown.

The worlds of Humaniti are split into two separate interstellar empires, the Imperium also called the 3<sup>rd</sup> Imperium, and the Medusa Web. After the fall of the 2<sup>nd</sup> Imperium, Humaniti experienced The Long Night, an Interregnum lasting nearly 500 years. During that time, the Human worlds along the border

with the Soroshe Empire banded together for mutual protection from Soroshe raids. The first worlds to unite were centered around the Medusa Nebula, which gave this coalition of planets their name, The Medusa Web. With the successful defense of their planets, the Medusa Web grew, as other planets petitioned for membership in the Web.

While the rest of the planets of Humaniti had several would-be emperors attempt to dominate the sphere of Humans, not until Cleon Zhuanastu from the Sylean Federation had anyone managed to succeed. The pacification wars that followed brought the rest of humanity into the Imperium save the Medusa Web, who managed to fend off the advances of the Imperium, having been defending their worlds for hundreds of years from Soroshe aggression. The 3<sup>rd</sup> Imperium calendar uses Cleon's ascent to the throne of the Sylean Federation as its year 0, thus the present date is 1105.
